The Geometric Mosaics at Khirbat Mar Elyas: A Comparative Study

Mohammad Nassar and Abdulmajeed Sabbagh

The Great Church at Khirbat Mar Elyas is one of the most important sites with geometric mosaic pavements in northern Jordan, with one of the best-preserved baptistries in the area. In 2000 Pope John Paul II visited the site; it is considered one of the five Christian pilgrimage sites in Jordan. The purpose of this study is to examine the specific types of geometric designs in comparison with other pavements of the Hellenistic, Roman, and Byzantine periods.

The site of Khirbat Mar Elyas, ca. 10 km. northwest of Ajloun City, is a geographically important tell dominating its surroundings (fig. 1), about 900 m. above sea level. The most important archaeological materials are on and around the main tell. Because of modern agricultural use, many archaeological remains have been lost or destroyed. Still, we can say that the Khirbat Mar Elyas finds are considerable, though poorly preserved.

Khirbat Mar Elyas was visited and described by some early travelers. One of the first archeologists who reported archaeological remains was van Kasteren; the area was also described by Steuernagel.

Greek, Roman, and Byzantine Studies 56 (2016) 528–555
© 2016 Mohammad Nassar and Abdulmajeed Sabbagh
The main finds have been the upper and lower churches, with remains of Roman, Byzantine, and Islamic date. The upper church is the object of the our article. There are three inscriptions in the floor, one of which dates the church to A.D. 624 (fig. 2).

*Figure 1. Khirbat Mar Elyas, from the west*

The upper church is a typical basilica with an apse, chancel, nave, and side aisles (fig. 3). Three apses constitute a cross, a plan rare in the region; but an example is in the West Bank, the
Figure 3. Plan of the church of Mar Elyas
church of the Nativity in Bethlehem, rebuilt by the Emperor Justinian in the sixth century.\(^3\) All of the Mar Elyas church was covered with mosaic pavements, but some areas are destroyed e.g. in the nave and the apses (fig. 4).

The chancel of the church (fig. 5) measures 3.60 m. east/west and 9.00 north/south. Its mosaic floor is enclosed by a border with swastika meander motif, while the panel has diamond motifs.

The outer border (fig. 6) is a latchkey meander in swastikas with spaced upright double latchkeys with a square in each space. The colours are dark red on a white background.

Two parallels are in the Madaba area. One is in Mosaic of Achilles (first half of the sixth century).\(^4\) There the latchkey meanders in swastikas lack squares; the colours are red and

dark red on a white background. The other is in the aisles of the Basilica of Moses at Mount Nebo-Siyagha (first half of the sixth century), a similar latchkey meander but in design and colours closer to the Mosaic of Achilles. The motif is found elsewhere in the Near East in the Roman and Byzantine periods, e.g. in the Villa of the triclinos at Apamea (539).

Asia Minor, there are three examples at Aphrodisias in Caria. In the South Room of the North Temenos Complex (350–375)\(^7\) is a meander of spaced recumbent double latchkeys with a horizontal rectangle in each space; the colours are dark blue and orange on a white background. In the North Room of the Teterapon House (early fifth century), the colours are dark blue on a white background.\(^8\) Room 3 of the Bishop’s Palace (350–375)\(^9\) has latchkey meanders in two-strand guilloche and rainbow (a panel rather than a border as at Mar Elyas). The colours are dark blue on a white background. Another example in Asia Minor is in the Stoa of the Alytarch in Ephesus (fourth century);\(^10\) the colours are dark blue and red, on a white background.

Significantly, the motif is considerably older, already in use during the Hellenistic period, and a common design throughout the Byzantine period. An example from the western provinces (Britain), is in the Bacchus mosaic at Verulamium (fourth century),\(^11\) but there the design is a panel rather than a border; the colours are grey on a white background.

Figure 7. Chancel mosaic, inner border

An inner border of serrated saw-tooth pattern frames the eastern first panels on each side of the chancel (fig. 7);\(^12\) the

\(^8\) Campbell, Mosaics of Aphrodisias 16–19, pl. 55–56.

\(^12\) M. Nassar, Catalogue of Geometric Mosaic Pavements of Jordan (unpublished,
colours are light red on a white background. Many parallels are found in Byzantine churches in Jordan.\textsuperscript{13}

\textit{Figure 8. Chancel, panel}

The panel in the chancel is decorated with squares and diamonds (fig. 8); each rib of the rhomboid is a lotus shape, while the inside of the rhomboid is a smaller rhomboid. The colours are dark red on a white background. Similar motifs found in Jordan are for example the nave of the First Church at Yasileh (mid fifth to early sixth century).\textsuperscript{14} There, each pair of shields is decorated, one with a two-strand guilloche and the other with a rainbow.

\textit{Figure 9. Nave borders}

\textsuperscript{n.d.), fig. 1:8.}
The nave (26.00 × 6.00 m.; fig. 9) is framed by six column bases on each side. The mosaic in the center is enclosed by a triple border: the outermost has a meander, the middle a double guilloche, and the inner one a saw-tooth motif.

![Figure 10. Nave, outer border](image)

The outer border border consists of a simple meander forming dentils (fig. 10);\textsuperscript{15} the colours are light red and black, on a white background. The same meander pattern can be found at other Byzantine sites in Jordan, for example in the north aisle of the Church of the Lions at Umm al-Rasas (574–589),\textsuperscript{16} with design and colours similar to those of Mar Elyas. There are two parallels at Gerasa. One is in the church of Saint John (531), the colours white on a dark red background.\textsuperscript{17} The other is between the columns of the church of Bishop Isaiah.\textsuperscript{18} An example at Pella is in the lower floor of the church.\textsuperscript{19} In the West Bank, an example is in the Beth Midrash of Meroth (early seventh century).\textsuperscript{20}

The middle border consists of a tongued double guilloche (fig. 11).\textsuperscript{21} The colours are dark red and light red and black, against a white background. Similar motifs elsewhere in Jordan

\textsuperscript{15} Nassar, Catalogue fig. 1:3.

include the north aisle of the Church of Procopius at Gerasa;\(^{22}\) the outer border of the nave of the First Church at Khirbet al-Bediyeh (640);\(^{23}\) in the Madaba area, the lower mosaic of the old Diakonikon Baptistry at Mount Nebo-Siyagha (530);\(^{24}\) in Umm al-Rasas the south aisle of the Church of the Lions (574 or 589);\(^{25}\) and the lower floor of the church at Pella (Tabaqat Fahal).\(^{26}\) Farther afield, an example of Hellenistic date is the border of the floor of Pappalardo House at Morgantina.\(^{27}\)

\[\text{Figure 11. Nave, middle border}\]

The inner border is a saw-tooth pattern similar to that in the chancel (cf. fig. 7); the colours are dark red and light red and black, against a white background.

The nave panel, mostly destroyed, has a perspective motif (fig. 12) and plants and flowers (fig. 13). A perspective design is found in e.g. the Church of Cosmas and Damian at Gerasa (533),\(^{28}\) where it adds a swastika pattern but has the same colours.

Figure 12. Nave panel, perspective motif

Figure 13 a, b, c. Nave panel, plants and flowers

Greek, Roman, and Byzantine Studies 56 (2016) 528–555
In the north intercolumniations the designs are mostly destroyed, but some decoration survives in the western part of the north aisle: intersecting circles form quatrefoils, with stylized crosslets in the centers of the quatrefoils (fig. 14). The colours are white and dark red, against a light red background. The intersecting circles motif became quite popular in the churches of Jordan in the Byzantine period, though it can be found as early as the Hellenistic age.\textsuperscript{29}

\textit{Figure 14. North intercolumniations}

\textit{Figure 15. North aisle}

\textsuperscript{29} For numerous examples see Z. Al-Muheisen and M. Nassar, \textit{GRBS} 54 (2014) 98–99.
The north aisle (29.50 × 5.50 m.; fig. 15) has five panels. The first (4.55 × 4.30 m.) is enclosed by a border consisting of outlined two-stranded guilloche of dark red, light red, and white, on a dark grey background (fig. 16). This border pattern is widespread in mosaics of the Roman and Byzantine periods.

Figure 16. North aisle, border

The enclosed mosaic has a composite motif (fig. 17), four squares connected by interlooped bands forming quadrilobes. The colours are dark red, light red, dark grey, and white, while the background is white. The center of each square has a circle with acanthus shapes as crosses; in each circle is a rosette with crosses.

Figure 17. North aisle, first panel border

This motif was rare: an example is in the nave of the Church of Saint George at Khirbat al-Samra in northeastern Jordan.
There the squares are filled with diverse motifs such as flowers, leaves, fruits, etc., while at Khirbat Mar Elyas we find only one theme, the circular rosette with crosses; but the colours are similar.

Figure 18. North aisle, second panel

The second panel (4.55 × 4.30 m.; fig. 18) has a composite pattern within a circle (2.00 m.), eight interlaced circles and squares. A large circle contains eight smaller circles connected with loops. These smaller circles are intertwined with one another; additionally, they are connected by eight squares having diagonals that are equal to the diameter of the circles, which touch each other at their corners. Superimposed squares are joined to form a star of two rotated squares at the center of the scheme. The borders of the squares and circles are decorated with triangular and oval shapes. The colours are red and dark red, on a dark red background.

Figures 19–20. Composite patterns (Gerasa)

Figures 21–22. Composite patterns (Yasileh, Yaʿamun)

There are two parallels at Gerasa, in the northern and the southern aisle of the Church of Procopius (526), where the small circles are connected to the outer circle by loops, and in the middle an inner ring is entwined with the eight circles (figs. 19–20). Instead of the eight small squares, we find there two large ones interlocked with the circles. In the nave of the First Church at Yasileh (mid-fifth/early sixth century; fig. 21) a large circle is connected by loops, with eight small circles in its interior. The small circles are intertwinied with each other and are connected by eight squares of the same size. In the chancel of the church at Yaʿamun (late fifth/early sixth century; fig. 22) the large circle contains eight smaller circles connected with loops. These smaller circles are intertwined with one another, and are connected by eight squares having diagonals that are equal to the diameter of the circles, which touch each

other at their corners. Superimposed squares are joined to form a star of two rotated squares at the center. The colours are red, dark red, blue, on a dark blue and red background.

Other examples of this motif are found in the region—thus an interlaced design in the church at Dayr al-Smadiyah (on Jabal Ajlun) near Khirbat Mar Elyas;34 also nearby, in the nave of the church of Rajeb;35 at Umm Qays (Gadara) in the Byzantine Bath;36 and at Bethlehem in the nave of the Church of the Nativity (Constantinian).37

![Figure 23. North aisle, intermediate design](image)

Between the second and third panels is a mosaic with three circles interlooped tangentially and intertwined, interlaced with two squares also of interlooped design (fig. 23). The colours are dark red, light red, dark grey, and white, on a dark red background. The design is similar to the second panel (circles and squares motif). The pattern is rare in the region, but one example from Bethlehem is in the nave of the Church of

37 Madden, *Ancient West and East* 11 (2012) 151, fig. 3.
the Nativity, where, the squares are tangent to the interiors of the circles.\textsuperscript{38}

The pavement of the third panel (7.00 × 5.50 m.; fig. 24) is enclosed by a border with a lotus motif, decorated by rows of zigzags. The colours of the panel are red, light red, blue, white, and light brown. The design is paralleled in Jordan in e.g. the west side of the central nave of the Second Church at Yasileh (mid fifth/early sixth century),\textsuperscript{39} where the colours are dark red, beige, bluish brown, black, and white. Compare too the nave of the lower church at Massuh near Hesban (fifth century).\textsuperscript{40} There are many examples at Antioch, e.g. in the House of Menander at Daphne (250–275).\textsuperscript{41} The pattern is also found in North Africa, thus the border of the hunt and amphitheater scenes at Cuicul.\textsuperscript{42}

\textsuperscript{38} Madden, \textit{Ancient West and East} 11 (2012) 151, fig. 3.
\textsuperscript{39} Z. Al-Muheisen and M. Nassar, \textit{GRBS} 52 (2012) 670, fig. 10.
\textsuperscript{40} M. Piccirillo, \textit{Liber Annuus} 33 (1983) 335–346, and \textit{Mosaics of Jordan} 254, pl. 446.
\textsuperscript{41} R. Ling, \textit{Ancient Mosaics} (London 1998) 58, fig. 40.
\textsuperscript{42} E. Kitzinger, in \textit{La mosaique gréco-romaine} (Paris 1965) 346, fig. 8; Ling, \textit{Ancient Mosaics} 122, pl. 87.
The motif between the third and fourth panels is an octagon connected with six half octagons (fig. 25); the colours are dark red, light red, dark grey, and white, the background dark red.

The fourth panel of the north aisle (6.10 × 5.50 m.), heavily damaged, has a border consisting of an outlined multi-swastika meander around recessed-returned swastikas (fig. 26). The swastika-meander is dark red on a white background.

The First Church at Yasileh, for example, has a meander border with recessed double reverse-returned swastikas divid-
ing squares; some squares are filled with a checkerboard pattern or with four-petal rosettes. The swastika-meander is dark red on a white background while the checkerboard squares are dark red, pink, yellow, and light blue on a white background; the rosettes are white on a dark red background. In the intercolumniations of the Khirbet al-Bediyeh church (640) the border has recessedreturned swastikas which divide squares containing birds. The motif is in fact as old as the Roman period.

**Figure 27.** North aisle, fourth panel, Solomon knot motif

Most of the fourth panel has been destroyed; but there remain three Solomon knot motifs (fig. 27), in red on a white background. The design is found at several sites in Jordan, for example in the north aisle of the Yaʿamun church, where the knot is within the squares, the colours red, blue, and dark blue, against a white background.

Two parallels are in the West Bank: in the nave of the Church of the Nativity at Bethlehem and in the south aisle of

Figure 30. North aisle, fifth panel
The south aisle (29.50 × 5.50 m.; fig. 31) is divided into two panels with geometric patterns. The first (9.50 × 5.40 m.) extends from the front of the south room to the beginning of the south apse; it is framed by a plain strip border. The enclosed pattern consists of lozenge motifs with a crosslet in the center of each lozenge (fig. 32); the colours are red, light red, and white. The motif finds parallels in the intercolumniations in the First

Greek, Roman, and Byzantine Studies 56 (2016) 528–555
Church at Yasileh, the south aisle in the Ya’amun church, the apse of the Khirbet al-Bediyeh church, and the aisles of the Ras ed-Deir church.

The second panel of the south aisle (20.00 × 5.00 m.; fig. 33) extends from the beginning of the south apse to the front of the side entrance of the aisle. It is divided into two parts, one with a motif of tangent scales, the other with lozenges.

The mosaic is surrounded by a complex border. Saw-tooth designs in dark red and light red on a white background frame a six-stranded guilloche of dark red and light red on a light blue and white background (fig. 34). A similar guilloche in Jordan is in the nave of the Western Church at Yasileh. In Israel, one can compare the synagogue at Hammath Tiberias

68 Al-Muheisen and Nassar, *GRBS* 54 (2014) 91, fig. 5.
69 Nassar and al-Muheisen, *PEQ* 142 (2010) 189, fig. 7.
Farther away, this type of guilloche is found in a mosaic made by Roman prisoners of war in the Palace of Sapor at Bishapur in southwest Iran (260).

The design of the first part of the second panel is tangent scales in outline, each with a flower inside (fig. 35). The scales are white, the flower dark red. The inscription dating the church (fig. 2) is in the center. Two parallels are in the Madaba area: in the baptistry (Diakonikon) of the Memorial of Moses at Mount Nebo-Siyagha (530), and in the south intercolumni-

ation of the church of Bishop Sergius at Umm al-Rasas.\textsuperscript{73}

Compare at Khirbet as-Samra the church of St. Peter,\textsuperscript{74} at Rihab the apse of the church of St. Basil (594),\textsuperscript{75} and the church at Pella.\textsuperscript{76}

\textbf{Figure 36. South aisle, second panel, second part}

The smaller second part is in front of the southwest side entrance of the church (\textit{fig. 36}); it consists of a row of joining lozenge motifs with a crosslet inside each lozenge. The colours are dark red, light red, and dark grey, on a white background. It seems that this design is rare in the Byzantine period.

In the \textit{north room} (5.60 × 4.00 m.; \textit{fig. 37}) the mosaic floor is framed by a swastika-meander border. The panel is decorated with squares of various sizes, filled of many different motifs—an interlaced square's motif, Solomon knot, zigzag, two-stranded guilloche, looped circles, perspective motif. The square at the center shows a basket of pomegranates. The colours are dark red, light red, dark grey, and white, on a dark background.

Parallels in Jordan are in the northwest panel of the Chapel of the Twal Family at Madaba,\textsuperscript{77} with a composite pattern of squares of various sizes filled with interlaced motifs and birds,

\textsuperscript{74} Humbert, in \textit{Christian Archaeology} 467–474; Piccirillo, \textit{Mosaics of Jordan} 307, pl. 606–608.

Campbell, Mosaics of Antioch 13, pl. 46, and 45, pl. 133.

Greek, Roman, and Byzantine Studies 56 (2016) 528–555
The baptistery room (8.80 × 7.60 m.; fig. 39) is in the northwest of the church. The decoration is in three parts: scales, lozenges with crosslets, and rows of circles. The lozenge panel is framed by double calices (fig. 40). The colours are dark red, light red, dark grey, and white, on a white background.

Conclusions

The Khirbat Mar Elyas church is important from several perspectives, first as a major pilgrimage site in Jordan. The plan with three apses is unusual in the area—we find one other
example in the West Bank, the Church of the Nativity in Bethlehem. We see also the high level of skill attested by the geometrical mosaic pavements in this church. Comparative study of the decorative elements increases our understanding of the relationship between Mar Elyas and other Byzantine sites. It allows us to compare the artistic level of the work elsewhere. Some designs make their first appearance in the mosaics at Mar Elyas, such as the lozenge motif in the south aisle (fig. 36). And some are of unusual sophistication when compared with similar designs elsewhere, such as the interlaced designs (figs. 19–22). The authors hope that these findings will contribute to scholarly appreciation of these art forms.
